                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         18;
                                                                                                                                                                                                                                                         This clone is from an A. gambiae BAC library (ND-TAM) provided by F.H. Collins and sequenced by The Institute for Genomic Research (TICR). The BAC library was generated from A. gambiae PEST strain DNA. All DNA was extracted from newly hatched first instar larvae to minimize the inclusion of DNA from microorganisms that inhabit the gut. The DNA is derived from mixed sexes of larvae. The BAC library was constructed at Texas A&M University BAC Center University, College Station, Texas 77843-2123, USA using a HindIII
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  BH393256 796 bp DNA linear GSS 11-DEC-200

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                was hydrodynamically sheared by repeated passage through a 0.005 inch orifice at constant velocity. The sheared DNA was blunt end-repaired with 74 DNA polymerase and 74 polynucleotide kinase. Adaptor oligonucleotides were ligated to the blunt ends in high molar excess. The adaptored DNA was purified and size-selected for a 9.5 to 10.5 kb range using preparative agarose gel electrophoresis. Vector DNA was prepared from a derivative of pwMA2 (gi14732114)gh AF129072.1), a copy number inducible derivative of plasmid R1. The vector was ligated with adaptors complementary to the insert adaptors and purified. The sheared, adaptored mouse DNA was annealed to adaptored vector DNA, and transformed into chemically-competent E. coli Xil0-Gold (Stratagene) cells and selected for ampicillin resistance."

pred. No. is the number of results predicted by chance to have a
score greater than or equal to the score of the result being printed,
and is derived by analysis of the total score distribution.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Score

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   SX SSSSSSSX S
          The invention relates to antisense inhibitors of genes essential to genes, their use in the discovery of novel antibiotics, the essential genes themselves and the encoded proteins. The prokaryotes used are pneumoniae, Pseudomonas aeruginosa and Enterococcus facealis. The invention is also useful for the identification of potential new targets to identify proteins used in proliferation, to express these proteins, and invention is also useful for the identification of potential new targets to identify proteins used in proliferation, to express these proteins, and the control of potential new targets to identify proteins used in proliferation, to express these proteins,
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Matches

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          This invention describes a novel p53-binding region of a human CD95 receptor DNA molecule. The p53-binding region, or a vector containing it, can be used to screen for apoptosis-modulating substances potentially useful for cancer chemotherapy. This sequence represents a fragment of the human CD95 receptor promoter which is capable of
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Sequence 20 BP; 6 A; 4 C; 4 G; 6 T; 0 other;

       The invention relates to antisense inhibitors of genes essential to prokaryotic cellular proliferation, their use in identifying the genes, their use in the discovery of novel antibiotics, the essential genes themselves and the encoded proteins. The prokaryotes used are Escherichia coli, Staphylococcus aureus, Salmonella typhi, Klebsiella pneumoniae, Pseudomonas aeruginosa and Enterococcus faecalis. The invention is also useful for the identification of potential new targets for antibiotic development. The antisense nucleic acids can also be used
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Matches

The present sequence is one of a large number of 5' ESTs derived from CC identified within the present sequence. The 5' ESTs were prepared from CC identified within the present sequence. The 5' ESTs were prepared from CC total human RNAs or polyA+ RNAs derived from 30 different tissues. EST CC sequences usually correspond mainly to the 3' untranslated region (UTR) CC sequences usually correspond mainly to the 3' untranslated region (UTR) CC libraries. Such ESTs are not well suited for isolating cDNA sequences CC libraries. Such ESTs are not well suited for isolating cDNA sequences country in the sequences have been obtained, the full 5' UTR is rarely included. CC CDNA sequences have been obtained, the full 5' UTR is rarely included. CC used to obtain full length cDNAs and genomic DNAs. 5' ESTs are also used in diagnostic, forensic, gene therapy and chromosome mapping procedures. They are used to obtain upstream regulatory sequences and to design CC expression and secretion vectors.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Query Match

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   and to obtain antibodies capable of binding to the expressed proteins. The proteins can be used to screen compounds in rational drug discovery programmes. The antisense nucleic acid sequence is also useful to screen for homologous nucleic acids which are required for cell proliferation in a wide wariety of organisms. The present sequence encodes an essential prokaryotic cellular proliferation protein.

Note: The sequence data for this patent did not form part of the printed specification, but was obtained in electronic format directly from WIPO at
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Sequence 306 BP; 117 A; 40 C; 65 G; 84 T; 0 other:

                                                                                                                                                                                                                                                                     The present sequence represents a specifically claimed partial nucleic acid sequence encoding human RAD54 (hRAD54). A method for analysing a CC sample for mutation of DNA encoding hRAD54 has been developed using a CC DNA sequence of at least 15 and no more than 30 consecutive bases of the DNA sequence encoding hRAD54. hRAD54 is a gene thought to be present identified as one of four minimal regions of chromosome 1 deletion in CC alia, that have been identified as novel hRAD54 is or production of proteins, inter CC amino acid sequence given in AAW62186 and known amino acid sequences cCC cancer, including Xeroderma Pigmentosum and Bloom syndrome, Werner's CC syndromes and X-linked mental retardation with alpha-thalassaemia CC detecting complementary nucleotides for use as a diagnostic agent, cc especially useful for diagnosis of disease or susceptibility to diseases. XXX proteins are useful in gene therapy.

```

AAH51601 represents a human genomic nucleotide sequence comprising sbg1, CC g34665, sbg2, g35017 and g35018 nucleic acid sequences located on the CC human chromosome 13g31-g33 locus. The nucleotide sequences contain CC hab62907 - AAB62915 represent cDNA human sbg1 cDNA sequences and polymorphisms. Sequences AAH51602 - AAH51626 and CC products. AAH51627 - AAH51621 and AAB62916 - AAB62918 represent g35018 CC cDNA sequences and protein products. Primers AAH51632 - AAH51699 are used CC crown sequences and protein products. Primers AAH51632 - AAH51699 are used CC camplicons which comprise biallelic markers located on the chromosome CC amplicons which comprise biallelic markers located on the chromosome CC are represented in the sequences by degenerate/undefined base codes. PCR cc is a sequence of the invention. The biallelic marker containing nucleotide sequences of CC used to determine the identity of the nucleotide at a biallelic marker in CC a sample DNA sequence. The nucleotide sequences may be labelled and used CC primers by determining the identity of a nucleotide at a Region CC subjects. By determining the identity of a biallelic marker in a biological sample from single or multiple population an association between a genotype and a trait, a haplotype and constrained to determine a predisoposition to or early onset of schizophrenia or treatment and sorder or a beneficial response to or side effects related to treatment against schizophrenia or bipolar disorder.

Sequence 3001 BP; 842 A; 608 C; 584 G; 966 T; 1 other;

These can be used in the prevention and treatment of reproductive system disorders, including cancer. The present sequence is a genomic sequence encoding a protein of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  05-DEC-2000;

is used in preventing, treating or ameliorating a medical condition Isolated nucleic acid molecule encoding a reproductive system antigen

Disclosure; SEQ ID NO 5934; 1297pp + Sequence Listing; English.

The present invention provides the protein and coding sequences of a number of human reproductive system related antigens. These can be used in the prevention and treatment of reproductive system disorders, including cancer. The present sequence is a genomic sequence encoding a protein of the invention.

Sequence 9824 BP; 3057 A; 1735 C; 1689 G; 3343 T; 0 other;

                                                                                                                                                               A computer readable medium has been developed which has recorded on it 982 nucleotide sequences isolated from the Enterococcus faecalis genome. AAX12938 to AAX13919 represent these nucleotide sequences which are primary nucleotide sequences, also known as contigs. The computer-based primary nucleotide sequences, also known as contigs. The computer-based primary nucleotide sequences, also known as contigs. The computer based for commercial importance. The products can be used to detect the presence of Enterococcus faecalis in samples. They can also be used for diagnosing Enterococcal infection in an animal and monitoring diagnosing Enterococcal infection in an animal and monitoring progression of disease, and for identifying agents which can be used to modulate the growth or pathogenicity of Enterococcus faecalis, or another related organism, in vivo or in vitro. In particular the polypeptides encoded by the Enterococcus faecalis nucleotide sequences can be used in vaccines to prevent or attenuate an Enterococcal

                                                                                                                                                                                                                                                                                                   The invention relates to a family of human genes referred to as the CC DAZ gene family, and to a functional DAZ homologue, DAZH. Members of the CC DAX gene family are clustered in the same region of the Y chromosome. CC In particular, the invention relates to an isolated DAZ gene (AAZ9249) present in interval 6D and/or 6E of the distal portion of Yq, mutations (CC In which are associated with reduced sperm count. The DAZH gene CC (AAZ92580) is located on chromosome 3; however, the entire DAZ gene CC (In which are sequences may be used as a source of primers and probes for uncledtide sequences may be used as a source of primers and probes for CC or deletion of the DAZ gene. They are also used as human chromosome Y reduced sperm count associated with alteration CC markers. Functional DAZ genes can be used in gene therapy for treating CC reduced sperm counts. Sequence AAZ9249 represents human DAZ cDNA, and CC aAZ92491-Z92492 are partial DNA sequences of DAZ gene family members.
                                                                                                                                                                                                                                             Query Match
